

Guardian

Allowing Guardian Past Google Chrome Pop-Up Filters

A recent update to the Google Chrome web browser has affected the launching of Section 1 within Guardian. This is due to Chrome's tightened restrictions on pop-ups, which stops certain workflows from correctly displaying in browser.

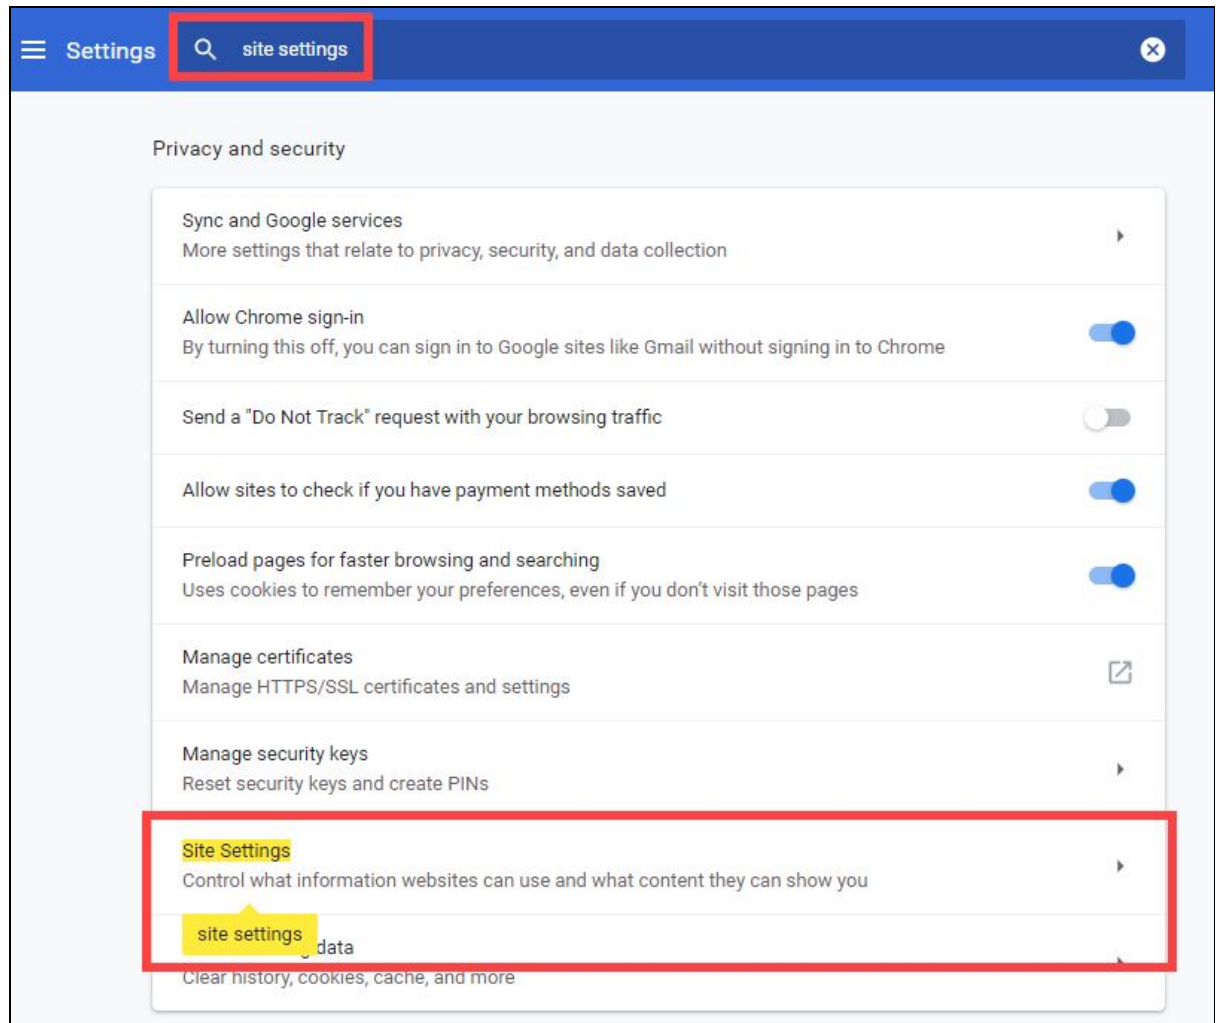

To correct this, users must proceed through the following steps:

1. Open the Google Chrome web browser.
2. Click the **Customize** (3 stacked dots) icon in the upper right.
3. Click **Settings** in the dropdown menu that appears

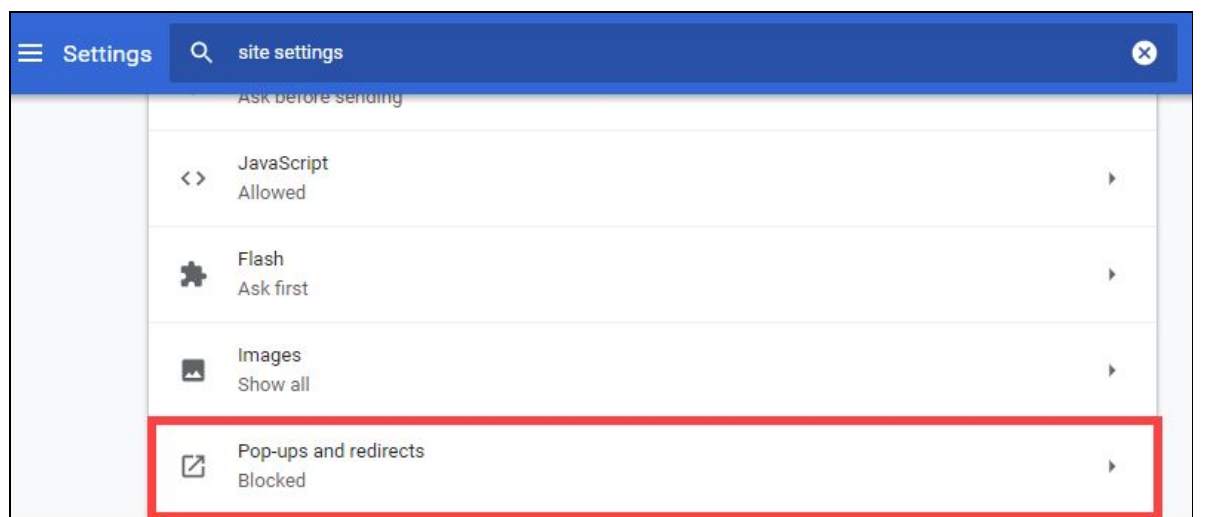

4. A Settings page will appear. Click the **Search Settings** bar at the top and type in **Site Settings**.

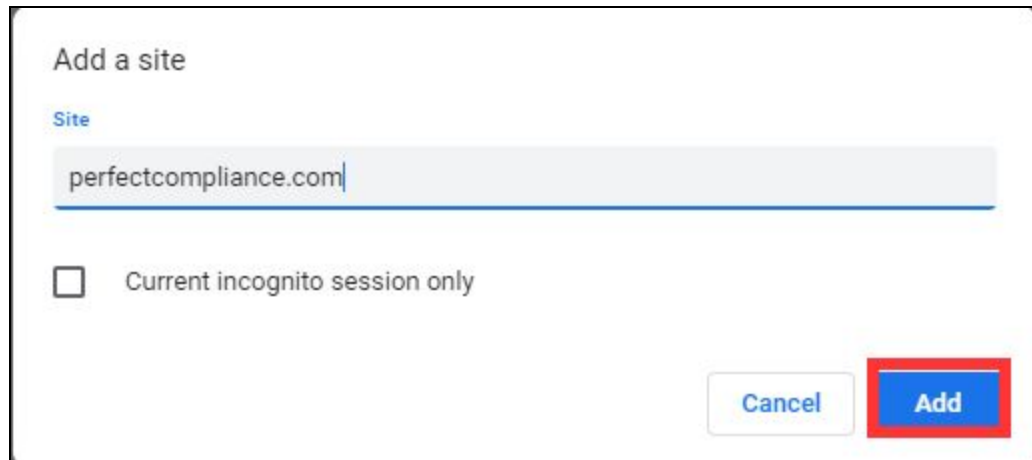

5. Click the **Site Settings** option in the results that are shown.

6. Within **Site Settings**, click **Pop-ups and Redirects** in the lower portion of the options available.

7. Click the **Add** button within the **Allow** section.
8. Within the pop-up that appears, enter **perfectcompliance.com** in the **Site** field.
9. Click **Add** in the lower right.

10. Close the browser window and relaunch the program.

Should users wish to simply allow pop-ups across all web browsing activity, clicking the toggle next to **Allow** on this page will enable pop-ups for Guardian, as well as any other visited sites.

Please note that this is not recommended by Google Chrome.
